EDA & KEY FINDINGS

Based on 840 hourly records | Nov - Dec 2016

F:1

Evening Demand Peak

Evening 5 - 8 PM shows avg 2,839 demand - far exceeding the 1,688 daily average. This is the absolute high-pressure window for the platform.

F:2

Morning Critical Shortage

3 AM - 9 AM coverage dips as low as 53% at 4 AM. Early morning has the highest percentage of unmet demand (81.5% at 6 AM).

F:3

Friday = Highest Weekday

Avg Friday demand is 62.8 rides - highest among weekdays. Weekend demand is surprisingly lower (Sat: 161, Sun: 100 at 9 AM).

F:4

2-Hour Supply Lag

Drivers peak at 8 - 9 PM while demand peaks at 6 - 7 PM - a 2-hour lag that results in peak demand being under-served every day.

F:5

Holiday Surge Effect

Dec 15 to 17 shows a high demand : 2,731 rides on Dec 16 with coverage dropping to 55%. Holiday pattern drives severe temporary gap.

TOTAL DAILY INCENTIVE COST (Critical Hours 3 - 10 AM)

₹3,337 per day

ADDITIONAL SUPPLY REQUIRED

Hours 7 - 10 AM = 243 driver per hours

Hours 6 - 8 PM: 98 driver per hours / Total : 341 driver – hours per Day

RECOMMENDATIONS

R1

Morning Shift Incentive (3 - 10 AM)

Guarantee ₹9/hr for drivers during 3 - 10 AM. Total daily incentive cost: ₹3,337. Fill the 81.5% coverage gap at 6 AM, reducing lost revenue estimated at ₹8K+/day.

R2

Use Absolute Gap Metric

Hour 20 shows 87% coverage but still 51 unmet rides. Coverage % alone is misleading. Track both Coverage% and Absolute Gap (unmet rides) for accurate decision-making.

R3

Push Notifications at 4:30 PM

Run driver push notifications at 4:30 PM to prompt early logins before the 6 PM demand surge begins. This directly addresses the 2-hour supply lag.

R4

Friday Demand Driver Bonuses

Friday has 69% higher demand than Sunday. Introduce 'Friday Peak Bonus' for drivers. Target 10–15% increase in active drivers on Fridays to capture unmet demand.

R5

Holiday Demand Pre-Alerts

Dec 15 to 17 holiday effect caused coverage to drop to 55%. Build a holiday calendar into driver incentive triggers - activate surge bonuses 48 hours before known holiday peaks.

R6

Dynamic Pricing for Off-Peak Hours

Off-peak hours have 74% coverage but low overall volume. Use time-of-day pricing discounts to shift some demand to hours 10 AM - 4 PM, smoothing the demand curve.

WHAT THE DATA SHOWS

- Evening 6 to 7 PM is peak demand hour (avg 92 rides)
- 3 - 10 AM has critically low coverage (as low as 53%)
- Supply lags demand by 2 hours every day
- Fridays see 69% more demand than Sundays
- Dec 15 - 17 holiday effect caused 55% coverage drop
- Only 335 of 1,158 avg daily demand gets a ride

ACTION PLAN

- ✓ ₹9/hr incentive for morning shift (3 - 10 AM)
- ✓ Push notifications to drivers at 4:30 PM daily
- ✓ Friday demand-based driver bonuses
- ✓ Track Absolute Gap alongside Coverage%
- ✓ Holiday demand calendar triggers
- ✓ Dynamic off-peak pricing to smooth demand
